

Department of Industrial and Systems Engineering School of Engineering and Applied Sciences

# Industrial Development Plan

**Board to Death - Game Manufacturer** 

Thomas Allan Yunmei Zheng Jack Wuerfel Huize Hou

# **Project Overview and Milestones**

- Startup company looking to manufacture board games on a medium-scale
- Contract jobs to meet surge in demands flexible manufacturing model
- Middleport, NY (Niagara County)
- Site visit on 3/29, meet with owner
- Progress meetings with Professor Becker on 4/3 and 4/21
- Buffalo Games tour 4/18

# **Facility Specifications**

# **Facility Specifications**

- Standalone building
- Rectangular and empty
- 10,000 sqft. w/ 21 ft. ceiling
- Water: 8" main
- Electric: 480 3-phase
- Rail access

Hellner Development Co. is build-to-suit

# **Production Requirements**

#### **RAW MATERIAL**

Cardboard
Paper
Plastic
Outsourced

#### **PROCESSING**

Printing
Cutting
Gluing
Injection Molding
Assembly
Palletizing

#### **FLEXIBILITY**

Size of Gameboard
Game Components
Order Quantiy
Production Schedule

## Raw Materials Chart

## Process Flow Example

# Methods: Bill of Materials and Assembly Chart

Level	Part #	Part Name	Make/Buy	Qty.
2	P01	Game board	M	1
2	P02	Printed gameboard design	M	1
2	P03	Game box	М	1
2	P04	Printed box design	М	1
1	P05	Plastic box Insert	М	1
1	P06	Infantry	М	200
1	P07	Cavalry	М	60
1	P08	Artillery	М	40
1	P09	Cards	М	56
1	P10	Dice	В	5
1	P11	Gameplay Rules	М	1
1	F01	Finished Gameboard	М	1
1	F02	Finished Box	М	1
0	G01	Finished Board Game	M	1

# Methods: Department List and Route Chart

Department	Dept.			
Shipping/Receiving	Α			
Storage Racks (S)	В			
Printing	С			
Gluing	D			
Injection Moulding	Е			
3D Printing	F			
Cutting	G			
Assembly	Н			
Storage Racks (N)	Ι			
Offices (2-story)	J			
Maintenance	K			

Part	Routing	Qty. per batch
Board	A-B1-G-D-H-A	1
Box	A-B1-G-D-H-A	1
Plastic Pieces	A-I-E-H-A	1.22
Cards	A-B2-C-G-H-A	6.22
Board Design	A-B2-C-G-D-H-A	1
Box Design	A-B2-C-G-D-H-A	1
Rules	A-B2-C-G-H-A	1
Dice	A-H-A	1

Assumed batch production of cards and injection molding

## Methods: Flow-Between Chart

	Α	B1	B2	С	D	Е	G	Н	I
Α	-	2	9.22	0	0	0	0	14.4	1.22
B1		-	0	0	0	0	2	0	0
B2			-	9.22	0	0	0	0	0
С				-	0	0	9.22	0	0
D					-	0	4	4	0
Е						-	0	1.22	1.22
G							-	7.22	0
Н								-	0
I									-

- Establishes clear relationships
- Strong connection between A and H (Shipping/Receiving and Assembly)
- Plastic pieces are batched at high volume

# Methods: DCA for Equipment

- Confirmed clustering of similar processes and part types
- Two separate sections of facility

#### <u>Advantages</u>

Simple to use Clear solutions

#### <u>Disadvantages</u>

Works better with large number of products/machines

# Miscellaneous Departments

- Office Space: two-story modular pre-fab design
- 3D Printing area for prototyping
- Maintenance Crib

### **MIP Functions**

#### Since

- department A: Shipping/ Receiving;
- department F: 3D Printing;
- department J: Office;
- department K: Maintenance are Fixed.

## **MIP Result**

0 == Storage Rack 1

1 == Storage Rack 2

2 == Printing

3 == Gluing

4 == Injection Moulding

5 == Cutting

6 == Assembly

7 == Storage Rack 3

# MIP Result Roughly Adjusted

#### Disadvantages:

- Some of shapes are not good. The narrowest department is only 8 feet.
- Not easy to fit the size, shape, layout of machines.
- Difficult to decide the raw material warehouse and the product warehouse.
- Not match the result of DCA

## Limitations

- Extremely specialized equipment
- Actual flow rates too high for size of building
- Irregular and static shape of machinery (e.g. printer is appx. 35 x 8 ft.)
- Scope of project much wider than 10-minute presentation

## **Proposed Design**

# **Evaluating with CRAFT**

Assumed  $C_{ij}$  is \$1 for all movement - could vary based on Material Handling methods

## Improvements: CRAFT

- Constrained dept. A (Shipping/Receiving) near east door
- Move dept. F (3D Printing) to the west of I and E
- Switch depts. D and G (Cutting and Gluing) for a 3% cost reduction
